

## PromPro: devoted EEPROM programmer

**PromPro** is a personalized software for memorizing data inside any EEPROM memory with Microwire protocol of any dimension and organization.

Thanks to this program, any consumer, even if inexperienced, can easily insert in very intuitive way the data that he intends to memorize on EEPROM, without the aid of other software that first creates a binary file and then memorize it on the chip.

The software is available for any 32 bit Windows version.

The input screen, personalized according to demands, can manage any type of data, both standard (for example laces of characters, integer, numbers in fixed points and in floating point), and not standard.

The interface can be realized according to personalized specifics for a direct connection to the device that climbs on the EEPROM memory.

**The software is available for Windows 95, 98, ME, 2000, XP and NT 4.0**

**PromPro** supports all the EEPROM memories with Microwire protocol . Among these
